Building the Great Pyramid in a Year: An Engineer's Report

Gerard C. A. Fonte

Building the Great Pyramid in a Year: An Engineer's Report Gerard C. A. Fonte

Work smarter, not harder? Most archaeologists feel that 25,000 workers spent 20 years building the Great Pyramid in Egypt over 4000 years ago. However, by closely examining the clues and artifacts left behind, and by assuming that the Egyptians were clever and intelligent, it is found that 10,000 workers could have built the Great Pyramid in about 385 days. This book, for high school readers and up, shows how, even at a more realistic, relaxed building schedule, the project could have been completed easily within four to six years by just 4000 workers.

Gerard Fonte presents the construction of the Great Pyramid as a wonder indeed, while challenging our cherished notions of the arduous labor and extreme human costs required for the project. Starting with his knowledge of project management, the properties of basic materials, and common sense, and giving the Egyptians credit as a sophisticated and well-run society, he shows step by step how they may have built great edifices and enhanced social cohesion at the same time. He posits that some of the implements found at archeological sites were clever labor-saving devices, and using experiments, models and tests he illustrates some ingenious techniques that were well within the scope of Egyptians' technical knowledge. Photographs and diagrams support his theory.

This research covers all major aspects of pyramid building: quarrying, moving, placing, lifting, fitting the blocks, finishing the outer casing blocks, placing the top-most blocks, tool specifications, wood requirements and machine design. It examines Egyptian pyramids in general, general pyramid geometry, common pyramid fallacies, available worker population, social effects of large works and scale factors in engineering. It is important to emphasize that everything is based on archaeological remains, forensic evidence, engineering principles, common sense and creativity. Additionally, it presumes that the Egyptian builders were intelligent and innovative and would use the best available techniques.

In particular, two mysterious tools that have been found at the pyramid site are examined and found to instrumental for moving and lifting the blocks. The first is the wooden quarter circle or rocker which is made from imported cedar. The author built replicas of these tools and was able to move a 4200 pound concrete pyramid block 15 feet in less than 10 seconds by himself and from a stationary starting position. (The author was 52 years old and weighed 135 pounds at the time.) A forensic examination of the second tool, a proto-pulley, reveals that the Egyptians used a particular type of lever to lift the blocks. A time-motion examination showed that three men could lift a block a full course in just three minutes with this lever. The conventional approaches of using ramps to lift blocks and sledges to move blocks are examined and shown to be flawed. The consequences of employing these methods lead to untenable situations, like a quarry that must supply twice as much rock than it can possibly hold.

Fonte is a practicing engineer with a private firm and has some 30 years of varied hands-on experience ranging from commercial products to military designs. He offers a forensic-engineering exploration of the construction of the Egyptian pyramids. Through a close examination of the clues and relics left behind, and working under the assumption that the Egyptians were intelligent and creative, Fonte concludes that the Great Pyramid at Giza could have been constructed in four to six years by 4,000 workers far less time than the estimate of 25,000 workers laboring over 20 years favored by most archaeologists. Illustrated with b&w photographs and diagrams, the text is academic but accessible to the general reader.

From reader reviews:

Donna Miller:

In other case, little individuals like to read book Building the Great Pyramid in a Year: An Engineer's Report. You can choose the best book if you like reading a book. So long as we know about how is important any book Building the Great Pyramid in a Year: An Engineer's Report. You can add knowledge and of course you can around the world by a book. Absolutely right, because from book you can learn everything! From your country right up until foreign or abroad you can be known. About simple factor until wonderful thing you can know that. In this era, we can open a book or perhaps searching by internet system. It is called e-book. You need to use it when you feel bored to go to the library. Let's learn.

Philip Newman:

Often the book Building the Great Pyramid in a Year: An Engineer's Report has a lot associated with on it. So when you make sure to read this book you can get a lot of advantage. The book was compiled by the very famous author. Mcdougal makes some research before write this book. This specific book very easy to read you can obtain the point easily after scanning this book.

Sherrie Smith:

Building the Great Pyramid in a Year: An Engineer's Report can be one of your basic books that are good idea. Most of us recommend that straight away because this publication has good vocabulary that could increase your knowledge in language, easy to understand, bit entertaining however delivering the information. The copy writer giving his/her effort to get every word into satisfaction arrangement in writing Building the Great Pyramid in a Year: An Engineer's Report however doesn't forget the main stage, giving the reader the hottest along with based confirm resource data that maybe you can be considered one of it. This great information can drawn you into brand-new stage of crucial imagining.

Helen Widner:

You can find this Building the Great Pyramid in a Year: An Engineer's Report by look at the bookstore or Mall. Just simply viewing or reviewing it could to be your solve problem if you get difficulties to your knowledge. Kinds of this e-book are various. Not only through written or printed but in addition can you enjoy this book by simply e-book. In the modern era such as now, you just looking because of your mobile phone and searching what your problem. Right now, choose your ways to get more information about your guide. It is most important to arrange you to ultimately make your knowledge are still up-date. Let's try to choose correct ways for you.
