John Glaser has been an astute observer and recognized leader in the health care industry for over thirty years. He has written a regular column for *Hospitals & Health Networks* in which he comments on a wide range of topics, including improving organizational performance through health information technology (HIT), changes in HIT architecture, challenges in leveraging data, and the evolution of the role of IT leadership.

Glaser on Health Care IT: Perspectives from the Decade that Defined Health Care Information Technology is a collection of some of the most widely read articles that have been published in *H&HN Daily*, *H&HN Weekly*, and *Most Wired Online* in the past decade (2005–2015). The columns are dated to show their original publication dates, and the material is organized into four broad themes:

1. HIT Applications and Analytics Challenges
2. Improving Organizational Performance through HIT
3. IT Management Challenges
4. HIT Industry Observations

Each section offers readers an intimate look at the myriad issues associated with getting IT "right" and the organizational performance gains that can be achieved in doing so. Moreover, the book examines the power and potential of the technologies available to health care providers today, as well as the transformative nature of those we have yet to fully embrace.

From seasoned CIOs and consultants to software developers and nurses, this book provides invaluable insights and guidance to all those seeking to make the delivery of care safer, more effective, and more efficient through the application of health care IT.

Foreword by Russ Branzell, President and CEO, College of Healthcare Information Management Executives (CHIME)
