The Interstellar Age: The Story of the NASA Men and Women Who Flew the Forty-Year Voyager Mission Jim Bell

Chosen as one of Amazon's Best Books of 2015!

An ALA Notable Book of 2015

The story of the men and women who drove the Voyager spacecraft mission— told by a scientist who was there from the beginning.

The Voyager spacecraft are our farthest-flung emissaries—11.3 billion miles away from the crew who built and still operate them, decades since their launch.

Voyager 1 left the solar system in 2012; its sister craft, *Voyager 2*, will do so in 2015. The fantastic journey began in 1977, before the first episode of *Cosmos* aired. The mission was planned as a grand tour beyond the moon; beyond Mars, Jupiter, and Saturn; and maybe even into interstellar space. The fact that it actually happened makes this humanity's greatest space mission.

In *The Interstellar Age*, award-winning planetary scientist Jim Bell reveals what drove and continues to drive the members of this extraordinary team, including Ed Stone, *Voyager*'s chief scientist and the one-time head of NASA's Jet Propulsion Lab; Charley Kohlhase, an orbital dynamics engineer who helped to design many of the critical slingshot maneuvers around planets that enabled the *Voyagers* to travel so far; and the geologist whose Earth-bound experience would prove of little help in interpreting the strange new landscapes revealed in the *Voyagers*' astoundingly clear images of moons and planets.

Speeding through space at a mind-bending eleven miles a second, *Voyager 1* is now beyond our solar system's planets. It carries with it artifacts of human civilization. By the time *Voyager* passes its first star in about 40,000 years, the gold record on the spacecraft, containing various music and images including Chuck Berry's "Johnny B. Goode," will still be playable.

From the Hardcover edition.
