Gastrointestinal Oncology: Basic and Clinical Aspects (Cancer Treatment and Research)

Gastrointestinal Oncology: Basic and Clinical Aspects (Cancer Treatment and Research)

This is the third volume on gastrointestinal cancer of the Cancer Treatment and Research Series. The emphasis in this volume is to present a series of papers on areas of high clinical relevance in malignant diseases of the gut. As in the first and second volumes of this series, authors have been selected for their expertise and national and international prominence in their fields. This volume is organized so that papers explaining basic science precede those dealing with clinical aspects of gastrointestinal cancer. It is clear that in many instances advances gastrointestinal carcinoma cannot be effectively treated if 'cure' is the desired goal. When faced with poorly treatable diseases it is obviously important to look toward the causes and prevention of these illnesses. For this reason, there are several chapters in this volume that examine the issue of carcinogenesis of gastrointestinal cancer. Likewise, in diseases that are poorly treatable in advanced stages, one is interested in early detection. Thus, early screening of populations becomes important and is dealt with in three papers in this volume. Chapters on treatment explore innovative approaches to therapy of gastrointestinal cancer. Second-look surgery with resection, arterial perfusion with chemotherapy, adjuvant therapy and neoadjuvant therapy are all addressed in various chapters in this volume. Finally, four chapters deal with unusual problems in gastrointestinal cancer. These papers include discussions of primary hepatobiliary cancer, lymphoma of the gut, and gastrointestinal endocrine tumors.
